# Fry Construction Completes Groundbreaking Cancer Treatment Center

By: [Fry Construction, Inc.](#) via [Business Wire News Releases](#)

Fry Construction, a specialist in the precision construction of medical facilities for over 29 years, announces the successful completion of a state-of-the-art cancer treatment facility that provides advanced noninvasive robotic radiosurgery options to patients in North Texas.

*"We knew that Fry Construction would complete the project on schedule, within budget and build it to the specifications that would allow the equipment to operate to its highest potential. We received exactly what we expected."*

Premier Cancer Centers Dallas opened in April 2013, offering stereotactic radiosurgery, intensity-modulated radiation therapy and the Accuray TomoTherapy® H™ Series all in one location. The new facility also houses the state's first Accuray CyberKnife® M6™ Series — the latest technological advancement in robotic radiosurgery capable of treating tumors anywhere in the body. This technology offers unmatched clinical capabilities and expands the number of patients eligible for treatment.

Due to the highly specialized nature of this project, the client chose Fry Construction as the general contractor based on the company's proven expertise in the construction of medical imaging facilities.

“We chose Fry Construction because of their reputation and experience,” explained Jeff Guest, CEO and founder of Premier Cancer Treatment Centers. “We knew that Fry Construction would complete the project on schedule, within budget and build it to the specifications that would allow the equipment to operate to its highest potential. We received exactly what we expected.”

#### **About Fry Construction, Inc.**

Fry Construction Company, Inc., is a leader in the precision construction of medical facilities. Since completing Dallas’ first magnetic resonance imaging center in 1984, Fry has completed more than 850 specialized medical projects — including new construction and retrofit structures for cancer treatment, surgery or imaging. Consulting services are available in the United States, Canada, Mexico and the Caribbean.
