## FRY CONSTRUCTION SELECTED FOR HIGH-PROFILE MEDICAL IMAGING PROJECT

### FACILITY IN SHERMAN WILL SET KEY INDUSTRY RECORDS

Carrollton, TX — September 2007 — Fry Construction, a specialist in the precision construction of medical imaging facilities, has announced it has begun construction of a breakthrough facility in the medical imaging arena. The project, in Sherman, Texas, represents several firsts of its kind.

Located at 2622 US Highway 75 North, Sherman, Texas, it is the first joint venture between multiple hospitals and radiology groups in the North Texas area. In this project, Sherman Radiology Associates and Radiology Associates of Denison collaborated with Wilson N. Jones Hospital and Texoma Medical Center to form Advanced Medical Imaging of North Texas, LP. An entity formed by the radiology groups will manage the facility and provide professional radiology services at the Center.

The facility will be the first free-standing, all-digital outpatient imaging center in the area, featuring cutting-edge 3T MRI technology as well as 64 detector CT technology, digital radiography, fluoroscopy and ultrasound.

The center will be designed with a natural, hill country look and feel, a decidedly refreshing innovation versus the traditional "medical clinic" look.

"We are thrilled to be a part of such a medical imaging milestone and are proud that Fry Construction continues to be picked for these type of all-important projects," stated Ben Fry, President of Fry Construction.

Mark S. Martin, Founder and President of Optima Imaging, LLC, the consulting company that facilitated the formation of the joint venture as well as the design of the facility and equipment selection, added, "We selected Fry Construction based on their long-standing reputation in the imaging community and the positive past experiences of both hospital partners. With such a significant project, there is little room for error and we were confident that Fry Construction would meet our expectations."

The Sherman, Texas project adds to Fry Construction's growing portfolio of high profile development projects.

About Fry Construction Company, Inc.

Fry Construction Company, Inc. is the leader in the precision construction of medical imaging facilities. Fry pioneered the practice of precision construction in 1984 at the University of Texas Health Science Center and has completed nearly 500 specialized facilities over the past two decades.
