FRY CONSTRUCTION IS FEATURED IN KEY INDUSTRY PUBLICATION

20-YEAR SPECIALIST RECOGNIZED FOR ITS ACHIEVEMENTS

Carrollton, TX — August 2007 — Fry Construction, a specialist in the precision construction of medical imaging facilities, has been recently featured as a success “case study” in the November issue of Construction Digital magazine. The feature, entitled “Specialization Leads to Success,” is an in-depth look at the company, its leadership and the story behind its incomparable success in the industry.

While it is unusual for a construction firm to be so highly specialized, the article points out that it was a practical choice for the company’s founders and one that has led to a major competitive strength. The proof, as the article points out is that Fry Construction is on the preferred contractor list for the five biggest-name manufacturers of medical imaging equipment: Siemens Medical Solutions, GE Medical Systems, Toshiba American Medical Systems, Philips Medical Systems and Hitachi Medical Systems. This is believed to be the single-largest endorsement for this type of construction company.

“To this day, we feel like we have the most experience in constructing MRI and imaging systems in Texas,” stated Ben Fry, the company’s President and co-founder. He added, “this is why we’re the ones they call when it’s a difficult project.”

In addition to direct construction projects, FryCo also serves as a consultant-advisor to both equipment manufacturers and medical groups, providing developmental recommendations pulled from its extensive experience base.

Electronic reprints of the featured article can be found at www.fryco.com.
